This is specifically important for our codebase because code ownership and team membership changes over time: even if everyone that works with some piece of code currently understands it, such understanding is not guaranteed to hold a few years from. Some folks are used to having several code windows side-by-side, and thus don't have room to widen their windows in any case.

It also reduces function argument count, which makes function call easier. Beware of destructors, which are often longer than they appear because of implicit member- and base- destructor calls!

Appropriate use of default captures can remove redundancy and highlight important exceptions from the default. Increase maintainability and readability.

The name of a top-level namespace should usually be the name of the project or letter 'E' in floating-point literals and the hexadecimal digits 'A' to 'F' should always be uppercase.
