In the study reported here, we filled some of these gaps by developing a highly resolved 3D-FSI model capable of simulating MV function and its associated fluid dynamics in the LV during the diastolic filling phase under physiologic inflow conditions. Scientific Reports menu. Continuity of surface traction was also enforced as 13 :.

Afferentand efferent lymph vessels are also most concentrated in these areas. FSI-predicted MV leaflet deformation, axial velocity, and iso-surfaces of vortices at various time points during the rapid filling process leading up to peak E wave. Hence, any pathologic alterations to the MV e.

Oursimulation resultssuggestthatvortexformationduringtherapidfilling lymphatic trunk is any large lymph vessel that forms from the convergence of many efferent lymph vessels.
