If that weren't odd enough, it turns out a supernova blew up in the same place in the sky more than 60 years ago. When we look at the Little Dipper, we expect to see this pattern of stars and that these specific stars pointing to the appropriate ones are relatively brighter than the other stars in that constellation. For example, the closest stellar object to us after the sun is Alpha Centauri at 4. ReadMore.When they died, they transformed the early cosmos. A plasma includes both positively and negatively charged particles.
