Judi Hewitt, Academic Editor. Finally, the broader implications and societal impacts of this novel phase shift are examined in relation to food security, conservation and management.

Astropicalization continues and the diversity of herbivores in temperate areas. For example, in southern Japan, the disappearance of kelp habitat has led to the complete collapse of the abalone fishery, which went from generating 11 million yen in to extinction of the fishery by [34]. Tasman Front and eddy field—a region that separates the warm, nutrient-poor waters of the Coral Sea from the cold, nutrient-rich waters of the Tasman Sea, providing increased nutrients and plankton aggregations, and enhanced productivity that attracts mobile

species such as turtles, cetaceans, tuna and billfish.
Fisheries, Moreton Bay oysters. An extreme climatic event alters
marine ecosystem structure in a global biodiversity hotspot.
Experimental analyses of the structure and dynamics of
midshore rocky intertidal communities in New South Wales.
