### **Sunspots | Explore Royal Museums Greenwich**

Sunspots are temporary phenomena on the Sun's photosphere that appear as spots darker than the surrounding areas. They are regions of reduced surface.

### **Sunspot - Wikipedia**

Sunspots form on the surface of the Sun due to strong magnetic field lines coming up from within the Sun trough the solar surface and appear visibly as dark.

### **Sunspots - Windows to the Universe**

Sunspots are darker, cooler areas on the surface of the sun.

## **Article - Education Resources**

Sunspots are storms on the sun's surface that are marked by intense magnetic activity and play host to solar flares and hot gassy ejections from the sun's corona .

## **Sunspots - Windows to the Universe**

Sunspots are flat brown spots that develop on areas of your skin that are exposed to the sun. They're also known as liver spots, though they.

## **How to Deal with Sun Spots on the Body | Paula's Choice**

These are two pictures of different sunspots. The picture on the left shows the whole Sun with some large sunspot groups on it. The sunspot.
